Experiment: Online Library Management System

Aim

To design a simple HTML webpage for an Online Library Management System to display and manage book details.

Algorithm

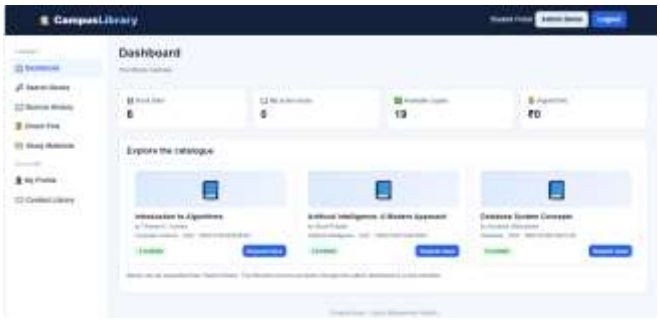

1. Start the program.
2. Create an HTML document.
3. Add a heading for the Library Management System.
4. Create a form to enter student and book details.
5. Add book selection and issue date fields.
6. Add a submit button.
7. Display the webpage.
8. Stop the program.

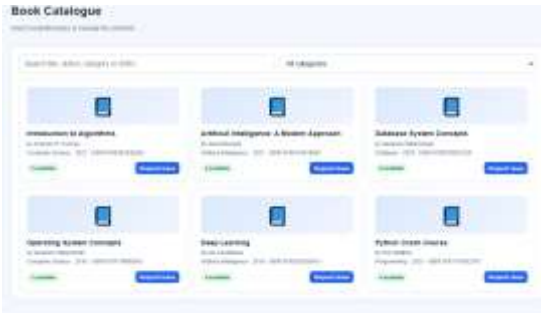

Short HTML Code

```
<!DOCTYPE html>
<html>
<head>
<title>Library Management</title>
</head>
<body>
<h1>Online Library Management System</h1>
<form>
Student Name: <input type="text"><br><br>
Student ID: <input type="text"><br><br>
Book Name:
<select>
<option>Python Programming</option>
```

```
<option>Machine Learning</option>
<option>Web Development</option>
<option>Data Science</option>
</select><br><br>
Issue Date: <input type="date"><br><br>
Return Date: <input type="date"><br><br>
<button type="submit">Issue Book</button>
</form>
</body>
</html>
```

Output:

Result

Thus, the Online Library Management System webpage was created successfully using HTML with student details, book selection, and issue and return date fields.
