Experiment: Online Train Reservation System

Aim

To design a simple HTML webpage for an Online Train Reservation System.

Algorithm

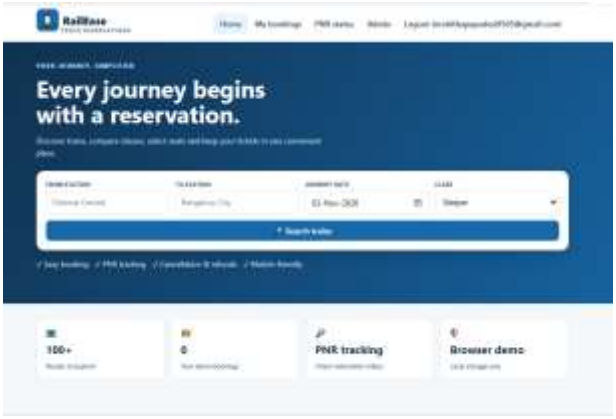

1. Start the program.
2. Create an HTML document.
3. Add a heading for Train Reservation.
4. Create a form to enter passenger details.
5. Add source, destination, and journey date fields.
6. Add train class selection.
7. Add a reservation button.
8. Display the webpage.
9. Stop the program.

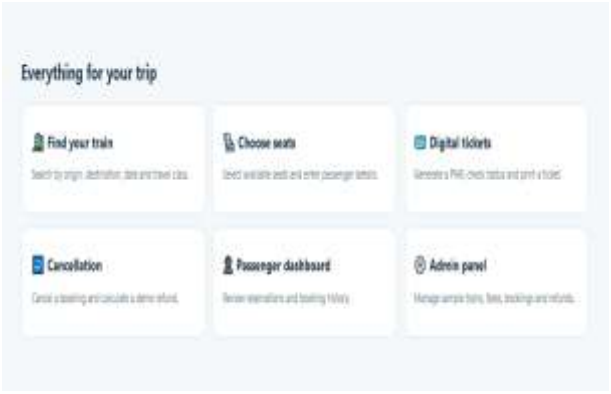

Short HTML Code

```
<!DOCTYPE html>
<html>
<head>
<title>Train Reservation</title>
</head>
<body>
<h1>Online Train Reservation</h1>
<form>
Passenger Name: <input type="text"><br><br>
From: <input type="text"><br><br>
To: <input type="text"><br><br>
Journey Date: <input type="date"><br><br>
Train Class:
<select>
```

```
<option>Sleeper</option>
<option>AC 3 Tier</option>
<option>AC 2 Tier</option>
<option>AC First Class</option>
</select><br><br>
Number of Passengers: <input type="number"><br><br>
<button type="submit">Reserve Ticket</button>
</form>
</body>
</html>
```

Output:

Result

Thus, the Online Train Reservation webpage was created successfully using HTML.
